SUBJECT INDEX

to Volume 135, September–December 1993

Actin
  function, screens for extragenic mutations, yeast, 265
  mutations that enhance *cap2* null mutant phenotype, pattern of growth, yeast, 693
  noncomplementing gene products, cytoskeletal proteins, yeast, 275
Adenosine monophosphate, cyclic, responsiveness, alleles *PDE1* and *PDE2*, yeast, 321
Aging, life span-determining genes, *Caenorhabditis elegans*, 1003
Alcohol dehydrogenase
  Drosophila pseudoobscura, linkage disequilibrium and recombination parameter, 541
  nucleotide polymorphism in *Adh1* locus, pearl millet, 1091
Alleles
  act1, actin function, yeast, 265
  immunoglobulin, variance analysis in natural populations, rabbit, 171
  PDE1 and *PDE2*, responsiveness, exogenous cAMP of yeast, 321
Allozymes
  pooled data, quantitative test, neutral theory, 233
  population structure in *Daphnia obtusa*, 367
Amino acid, single difference, vegetative incompatibility, *Podospora anserina*, 45
Anemia, hemolytic, lactate dehydrogenase locus *Ldh-1*, mutation, mouse, 161
Ankyrin, intragenic dominant suppressors of *glp-1*, cell signaling, *Caenorhabditis elegans*, 1023
Anthocyanin, paramutation, stable and heritable reduction of transcription, maize *b* regulatory gene, 881
Arabidopsis, single gene, duplicate cytosolic phosphoglucose isomerase genes, *Clarkia*, 895
Avena hirtula, *A. barbata* and, evolution, multilocus genetic structure, 1125

Bacteria, density, cytoplasmic incompatibility, *Nasonia vitripennis*, 565
Bacteriophage
  mu, mutational analysis, C-dependent late promoter, 619
  T4, *rII* gene, formation of tandem duplications, 255
Bean, mitochondrial genome organization, cytoplasmic reversion, fertility, 869
Behavior, genetic and molecular analysis, *X* chromosomal region 14B17-14C4, *Drosophila melanogaster*, 419

Caenorhabditis elegans, 53, 385, 741, 755, 765, 1003, 1011, 1023, 1035
Cattle, Salers, genotype distributions, β-mannosidosis, 855
Cell cycle
  genomic regions required for DNA replication, *Drosophila* embryogenesis, 817
  kinases Dbf2 and Dbf20, *Spo12*, mitotic chromatid disjunction in yeast, 963
Cell signaling, intragenic dominant suppressors of *glp-1*, *Caenorhabditis elegans*, 1023
Centromere, binding factor 1, point mutations and chromosome segregation, yeast, 287
Chlamydomonas reinhardtii, 375
Chloroplasts, DNA diversity, California closed-cone pines, 1187
Chondromyces crocatus, origins of multicellular development, 249
Chromatids, mitotic disjunction in yeast, *Spo12*, cell cycle kinases Dbf2 and Dbf20, 963
Chromatin, mutations that suppress deletion, upstream activating sequence, yeast, 665
Chromosome *6*, classical and molecular linkage maps, tomato, 1175
Chromosome *7*, *pid-Hbb* region, deletion mapping, *N*-ethyl-*N*-nitrosourea-induced mutations in mouse, 1117
Chromosome *X*, region 14B17-14C4, genetic and molecular analysis, *Drosophila melanogaster*, 419
Chromosome *Y*, interspecific replacements, hybrid sterility, *Drosophila simulans* clade, 443
Chromosomes
  -gain and increase-in-ploidy mutants in yeast, isolation, characterization, 677
  maize B, centric sequence, molecular characterization, 589
  mapping of multiple noninteractive loci, life span-determining genes, *Caenorhabditis elegans*, 1003
  recombination, single-division meiosis, yeast, 297
  second, *P-lac*W insertional mutagenesis, *Drosophila melanogaster*, 71
  segregation in progeny, RFLP analysis, *Solanum brevidens* and *S. tuberosum*, 1167
  segregation in yeast
    identification and cloning, *CHL4* gene, 327
    point mutations, 287
Circadian rhythms, biological rhythm mutant, gene with essential embryonic function, *Drosophila melanogaster*, 1077
Clarkia, duplicate cytosolic phosphoglucose isomerase genes, single gene in *Arabidopsis*, 895
Clocks
  molecular, method for calibration, animal mitochondrial DNA, 1197

molecular evolutionary clock hypothesis, sample methods for testing, 599
Collagen, *sqt-1* and *rol-6* genes, mutations, *Caenorhabditis elegans*, 1035
Communication, cell, suppressors of *glp-1*, development of *Caenorhabditis elegans*, 1011
Compensatory fitness, interactions in *Drosophila*, distance effect, RNA folding, 97
Complementation, *prickle/spiny-legs/costa*, 43A-E region, *Drosophila melanogaster*, 105
Computers, VNTR population genetics, constrained recombination, 911
Coprinus cinereus, *de novo* methylation, repeated sequences, 357
Cryptopleurine, resistance in yeast, expression, ribosomal protein gene family, 719
Cuticle, *sqt-1* and *rol-6* collagen genes, mutations, *Caenorhabditis elegans*, 1035
Cytochrome *b*, generation of temperature-sensitive *cbp1* strains, PCR mutagenesis, recombination and yeast, 981
Cytoplasm, incompatibility and bacterial density, *Nasonia vitripennis*, 565
Cytoskeleton
mutations that enhance *cap2* null mutant phenotype, pattern of growth, yeast, 693
proteins in yeast, actin noncomplementing gene products, yeast, 275
Cytosol, duplicate phosphoglucose isomerase genes, *Clarkia*, single gene in *Arabidopsis*, 895

Daphnia obtusa, population structure, 367
Deletions
N-ethyl-*N*-nitrosourea-induced mutations, postimplantation, *pid-Hbb* region of mouse chromosome 7, 1117
radiation-induced *albino (c)*-locus, preimplantation stages of development, mice, 1107
Disequilibrium, multilocus genetic structure, evolution, *Avena hirtula* and *A. barbata*, 1125
DNA
chloroplast, diversity, California closed-cone pines, 1187
damage repair, ends-in *vs.* ends-out, yeast, 973
insertional mutagenesis, cloning of flagellar genes, *Chlamydomonas reinhardtii*, 375
methylation, *Pl-Bh*, variegated maize pigmentation, 575
mitochondrial variation in animals, random walk model, geographic distributions, 1209
recF gene in *Escherichia coli* K-12, mutant alleles, high and low level overexpression plasmids, 643
repeated sequences in *Escherichia coli*, sister-strand exchange mechanism, *recA*-independent deletion, 631
replication, genomic regions, *Drosophila* embryogenesis, 817
stalking the elusive recombination intermediate, 609, 611
DNA topoisomerase, formation of tandem duplications, *rII* gene, bacteriophage T4, 255
Drosophila, 97, 405, 455, 469, 613, 817
Drosophila melanogaster, 71, 105, 117, 127, 149, 419, 477, 489, 507, 527, 553, 785, 801, 831, 1047, 1063, 1077
Drosophila pseudoobscura, 541
Drosophila sechellia, 135
Drosophila simulans, 135
Duplications, tandem, *rII* gene, bacteriophage T4, 255

Ecdysone, deletion scanning of regulatory seequences, *Fbp1* gene, *Drosophila melanogster*, 801
Eclosion, biological rhythm mutant, embryonic function gene, *Drosophila melanogaster*, 1077
Electrophoresis, high resolution two-dimensional approach, number of genes affecting hybrid male sterility, *Drosophila simulans* and *D. sechellia*, 135
Embryo
Drosophila, specification of dorsal-ventral pattern, *tube* and *pelle* genes, 405
postembryonic development, pleiotropic function of *Delta*, *Drosophila melanogaster*, 527
Embryogenesis
biological rhythm mutant, *Drosophila melanogaster*, 1077
genomic regions required for DNA replication, *Drosophila*, 817
Enhancer trapping, *hobo*, mutagenesis and insertion specificity, *Drosophila melanogaster*, 1063
Epistasis, life span-determining genes, *Caenorhabditis elegans*, 1003
Escherichia coli, 631, 643
N-Ethyl-*N*-nitrosourea-induced postimplantation-lethal mutations, deletion mapping, *pid-Hbb* region of mouse chromosome 7, 1117
ETS-related proteins, genetic dissection of *pointed*, *Drosophila*, 455
Evolution
duplicate cytosolic phosphoglucose isomerase genes, *Clarkia*, single gene in *Arabidopsis*, 895
dynamics of spore killers, 923
molecular evolutionary clock hypothesis, sample methods for testing, 599
multilocus genetic structure, *Avena hirtula* and *A. barbata*, 1125
population structure in *Daphnia obtusa*, 367

Fertility, cytoplasmic reversion, mitochondrial genome organization, bean, 869
Fitness, genotype distributions, β-mannosidosis, Salers cattle, 855
F statistics, effective sizes, subdivided populations, 1221

Galton, Francis, count and measure, perspectives, 1
Gene
ameiotic1, initiation of meiosis, subsequent meiotic events in maize, 1151
cellular polarity, 43A-E region, *Drosophila melanogaster*, 105
CHL4, identification and cloning, chromosome segregation in yeast, 327
conversions and crossing over, ectopic recombination, yeast, 5
costal-2, segmental polarity, *Drosophila melanogster*, 1047
CUP1, recombination of sequences, yeast, 711
dissection of *fused*, segmental polarity, *Drosophila melanogaster*, 1047
Drosophila melanogaster suppressor of Hairy-wing zinc finger, gene expression, yeast, 343
Drosophila stubarista, dosage effect of ribosome-associated protein D-p40, *spineless*, 553
duplicate cytosolic phosphoglucose isomerase, *Clarkia*, single gene in *Arabidopsis*, 895
Fbp1, deletion scanning of regulatory sequences, *Drosophila melanogaster*, 801
flagellar, cloning in *Chlamydomonas reinhardtii*, DNA insertional mutagenesis, 375
forked, effects of transposable elements, *Drosophila melanogaster*, 507
GAL83, genetic and molecular characterization, *Saccharomyces cerevisiae*, 655
glp-1 and *lin-12* interaction, suppressors of *lin-12* hypomorph, *Caenorhabditis elegans*, 765
histone regulatory, *HIR4-1* mutation, yeast, 25
hobo enhancer trapping mutagenesis, insertion specificity, *Drosophila melanogaster*, 1063
intragenic dominant suppressors of *glp-1*, cell signaling, *Caenorhabditis elegans*, 1023
longevity-determining, chromosomal mapping, multiple noninteractive loci, 1003
maize, targeted by distinct classes of *mu* elements, 1141
maize *b* regulatory, paramutation, 881
myosin, sequence requirements, *Caenorhabditis elegans*, 385
number affecting hybrid male sterility, *Drosophila simulans* and *D. sechellia*, 135
pointed, ETS-related proteins, *Drosophila*, 455
prickle/spiny-legs/costa, 43A-E region, *Drosophila melanogaster*, 105
recF, mutant alleles of *Escherichia coli*, high and low level overexpression plasmids, 643
rII, bacteriophage T4, formation of tandem duplications, 255
R in maize, somatic variegation and germinal mutability, position of *Dissociation*, 189
sel, hypomorphic *lin-12*, *Caenorhabditis elegans*, 755
SNF7, molecular and genetic analysis, yeast, 17
sqt-1 and *rol-6* collagen, *Caenorhabditis elegans*, 1035
sup-9 of *Caenorhabditis elegans* muscle, three new classes of mutations, 53
suppressors of *glp-1*, cell communication during development, *Caenorhabditis elegans*, 1011
tandemly arranged ribosomal 5S, deletions and amplications, *P* element and dysgenic context, 468
targeting, ends-in *vs.* ends-out, yeast, 973
tube and *pelle*, signaling between *Toll* and *dorsal*, dorsal-ventral pattern of *Drosophila* embryo, 405
unc-37, dominant mutations and *unc-4*, synaptic specificity in *Caenorhabditis elegans*, 741
uvsX and *uvsY*, formation of tandem duplications, bacteriophage T4, 255
Generations, efficiency, marker-associated QTL effects, multiple regression, 223
Genomes, plant mitochondrial, model simulating the dynamics, 213
Glucose, repression, characterization of *GAL83*, yeast, 655
Gα protein, inhibition of pheromone response pathway, pheromone receptors, yeast, 943

Heterosis, multilocus genetic structure, evolution, *Avena hirtula* and *A. barbata*, 1125
Histones
multigene family, distribution of rare variants, *Drosophila melanogaster*, 127
mutations that suppress deletion, upstream activating sequence, yeast, 665
regulatory genes in yeast, *HIR4-1* mutation, 25
Homeodomain, temperature-sensitive mutation in *unc-4*, mutations in *unc-37* locus, *Caenorhabditis elegans*, 741
Hybrid dysgenesis, cytotype control of *Drosophila melanogaster*, *P* element transposition, maternal repression, 785
Hybrids, *S. brevidens* and *S. tuberosum*, RFLP analysis, chromosomal segregation in progeny, 1167
Hymenoptera, *Solenopsis invicta*, effect of a founder event, variation in genetic sex-determining system, 843

Immunoglobulins, variance analysis of alleles, natural populations, rabbit, 171

Kinase, mutations that suppress deletion, upstream activating sequence, yeast, 665
Kinensin-related *CIN8* and *KIP1*, loss of function in yeast, suppression by *KAR3* motor domain mutations, 35

Lactate dehydrogenase, locus *Ldh-1*, mutation, mouse, 161
Linkage disequilibrium
recombination parameter and, segregating nucleotides, alcohol dehydrogenase region of *Drosophila pseudoobscura*, 541
RNA folding in *Drosophila*, distance effect, compensatory fitness interactions, 97
Locus

additive and dominant, estimation of effective number, quantitative variation, 907
Adh1, nucleotide polymorphism, pearl millet, 1091
albino (c), radiation-induced mutations, mouse, 1107
multilocus genetic structure, evolution, *Avena hirtula* and *A. barbata*, 1125
Responder, population genetics of tandem repeats, centromeric heterochromatin, 477
Longevity-determining genes, *Caenorhabditis elegans*, 1003

Maize
B chromosome centric sequence, molecular characterization, 589
b regulatory gene, paramutation, 881
genes targeted by distinct classes of *mu* elements, 1141
initiation of meiosis, role of *ameiotic1* gene, 1151
notable triumvirate of maize geneticists, 937
nucleotide polymorphism in *Adh1* locus, pearl millet, 1091
R gene, somatic variegation and germinal mutability, position of *Dissociation*, 189
variegated pigmentation, *Pl-Bh*, 575
β-Mannosidosis, genotype distributions, posterior genotype probabilities, Salers cattle, 855
Mapping
classical and molecular linkage, chromosome *6*, tomato, 1175
interval, multiple quantitative trait loci, 205
Maternal effect, repression of *P* element promoter, model for P cytotype, *Drosophila melanogaster*, 149
Maternal inheritance, cytotype control of *Drosophila melanogaster*, *P* element transposition, 785
Meiosis
initiation and in subsequent events in maize, role of *ameiotic1* gene, 1151
single-division, mixed segregation and recombination, yeast, 297
twenty-five years of meiotic mutants, *Drosophila*, 613
Meiotic drive, evolutionary dynamics, spore killers, 923
Methylation
de novo, repeated sequences, *Coprinus cinereus*, 357
DNA, *Pl-Bh*, variegated maize pigmentation, 575
Mice
lactate dehydrogenase locus *Ldh-1*, mutation, 161
pid-Hbb region of chromosome 7, deletion mapping, *N*-ethyl-*N*-nitrosourea-induced mutations, 1117
quantitative traits, effects, multiple retrovirus insertions, 1099
radiation-induced *albino (c)*-locus mutations, death, preimplantation stages of development, 1107
Microtubules, function in yeast, deletion, single-copy tRNA, 955
Millet, pearl, nucleotide polymorphism, *Adh1* locus, 1091
Mitochondria
animal DNA variation, random walk model, geographic distributions, 1209
generation of temperature-sensitive *cbp1* strains, PCR mutagenesis, recombination and yeast, 981
genome organization, cytoplasmic reversion to fertility, bean, 869
plant genomes, model simulating the dynamics, 213
plasmid suppressors, sexual cycle, *Neurospora intermedia*, 993
Mitosis
chromatid disjunction in yeast, *Spo12*, cell cycle kinases Dbf2 and Dbf20, 963
chromosome-gain and increase-in-ploidy mutants, characterization, yeast, 677
genomic regions required for DNA replication, *Drosophila* embryogenesis, 817
loss of function, yeast kinensin-related *CIN8* and *KIP1*, suppression by *KAR3* motor domain mutations, 35
mutations in protein phosphatase 1 gene at 87B, position-effect variegation, *Drosophila melanogaster*, 117
Morphogenesis, mutations that enhance *cap2* null mutant phenotype, pattern of growth, yeast, 693
Muscle, gene *sup-9*, three new classes of mutations, *Caenorhabditis elegans*, 53
Mutagenesis
DNA insertional, cloning of flagellar genes, *Chlamydomonas reinhardtii*, 375
hobo enhancer trapping, insertion specificity, *Drosophila melanogaster*, 1063
multiple retrovirus insertions, quantitative traits of mice, 1099
*P-lac*W insertional, second chromosome, *Drosophila melanogaster*, 71
single *P* element, spermatogenesis, *Drosophila melanogaster*, 489
Mutants
biological rhythm, gene with essential embryonic function, *Drosophila melanogaster*, 1077
chromosome-gain and increase-in-ploidy, characterization, yeast, 677
hypomorphic *lin-12*, genetic and phenotypic studies, *Caenorhabditis elegans*, 755
Mutations
cap2 null mutant phenotype, morphogenesis and pattern of growth, yeast, 693
dominant, *unc-37* locus, synaptic specificity in *Caenorhabditis elegans*, 741
extragenic, actin function, yeast, 265
HIR4-1, histone regulatory genes, yeast, 25
KAR3 motor domain, loss of function, yeast kinensin-related *CIN8* and *KIP1*, 35

lactate dehydrogenase locus *Ldh-1*, mouse, 161
PAS1-1, molecular definition, silencing in yeast, 931
pleiotropic function of *Delta*, postembryonic development, *Drosophila melanogaster*, 527
point, yeast centromere binding factor 1, chromosome segregation and transcriptional activation, 287
protein phosphatase 1 gene at 87B, suppression of position-effect variegation and mitosis, *Drosophila melanogaster*, 117
quantitative test of neutral theory, pooled allozyme data, 233
radiation-induced *albino (c)*-locus, preimplantation stages of development, mice, 1107
RNA folding in *Drosophila*, distance effect, compensatory fitness interactions, 97
sqt-1 and *rol-6* collagen genes, *Caenorhabditis elegans*, 1035
suppression of deletion, upstream activating sequence, yeast, 665
three new classes, *Caenorhabditis elegans* muscle gene *sup-9*, 53
Mutator, maize genes, targeted by distinct classes of *mu* elements, 1141
Myosin, gene expression, sequence requirements, *Caenorhabditis elegans*, 385

Nasonia vitripennis, cytoplasmic incompatibility, bacterial density, 565
Neurospora, 923
Neuropora intermedia, 993
Neutral theory, quantitative test, pooled allozyme data, 233
Noncomplementation, extragenic, actin noncomplementing gene products, yeast, 275
Nucleotides
chloroplast DNA diversity, California closed-cone pines, 1187
segregating, linkage disequilibrium and recombination parameter, *Drosophila pseudoobscura*, 541

Organelles, chloroplast DNA diversity, California closed-cone pines, 1187

Paramutation, stable and heritable reduction of transcription, maize *b* regulatory gene, 881
P element
hobo enhancer trapping mutagenesis, insertion specificity, *Drosophila melanogaster*, 1063
mobility, type I repressors, 81
mutagenesis, spermatogenesis, *Drosophila melanogaster*, 489
promoter in germline of *Drosophila melanogaster*, maternal repression, model for P cytotype, 149
tandemly arranged ribosomal 5S genes, deletions and amplications, dysgenic context, 469
transposition, cytotype control and maternal repression, *Drosophila melanogaster*, 785
P transposase, deletion scanning of regulatory sequences, *Fbp1* gene, *Drosophila melanogaster*, 801
Pennisetum glaucum, 1091
Peroxisome, import and assembly mutants, positive selection procedure, yeast, 731
Phaseolus vulgaris, mitochondrial genome organization, cytoplasmic reversion, fertility, 869
Pheromone, response pathway, inhibition by pheromone receptors, yeast, 943
Phosphoglucose isomerase, duplicate genes in *Clarkia*, single gene in *Arabidopsis*, 895
Phyiogeography, random walk model, geographic distributions, animal mitochondrial DNA variation, 1209
Pigmentation, variegated, *Pl-Bh*, maize, 575
Pines, California closed-cone, chloroplast DNA diversity, 1187
Plant, mitochondrial genomes, model simulating the dynamics, 213
Plasmids
high and low level overexpression, test of mutant alleles of *recF* gene, *Escherichia coli* K-12, 643
suppressors active in sexual cycle, *Neurospora intermedia*, 993
Podospora anserina, vegetative incompatibility, single amino acid difference, 45
Polymorphism
life span-determining genes, *Caenorhabditis elegans*, 1003
restriction fragment length
chromosomal segregation in progeny, *Solanum brevidens* and *S. tuberosum* hybrid, 1167
classical and molecular linkage maps, tomato chromosome *6*, 1175
histone multigene family, *Drosophila melanogaster*, 127
variance analysis of immunoglobulin alleles, natural populations, rabbit, 171
Population
genetics of tandem repeats, centromeric heterochromatin, *responder* locus of *Drosophila melanogaster*, 477
geographic distributions, random walk model, animal mitocondrial DNA variation, 1209
multilocus genetic structure, evolution, *Avena hirtula* and *A. barbata*, 1125
natural, variance analysis, immunoglobulin alleles, 171
structure in *Daphnia obtusa*, 367
subdivided, effective sizes, 1221
Position effects, cytotype control of *Drosophila melanogaster*, *P* element transposition, maternal repression, 785
Potato, *S. brevidens* and *S. tuberosum* hybrid, RFLP analysis, chromosomal segregation in progeny, 1167
Promoters, C-dependent late, mutational analysis,

bacteriophage mu, 619
Protein kinases, Dbf2 and Dbf20, *Spo12*, mitotic chromatid disjunction in yeast, 963
Protein phosphatase 1, gene at 87B, mutations and position-effect variegation, mitosis in *Drosophila melanogaster*, 117

Quantitative trait loci
estimation of marker-associated effects, multiple regression, efficiency of generations, 223
multiple, interval mapping, 205
multiple retrovirus insertions, mice, 1099

Rabbit, variance analysis of immunoglobulin alleles, natural populations, 171
Radiation-induced *albino (c)*-locus mutations, preimplantation stages of development, mice, 1107
Rearrangement, model simulating the dynamics, plant mitochondrial genomes, 213
Receptors, pheromone, inhibition of pheromone response pathway, yeast, 943
Recombination
chromosomes and YACs, single-division meiosis, yeast, 297
constrained, computer simulation study, VNTR population genetics, 911
ends-in *vs.* ends-out, yeast, 973
homologous and homeologous ectopic, gene conversions and crossing over, yeast, 5
intermediate, 609, 611
parameter and linkage disequilibrium, segregating nucleotides, alcohol dehydrogenase region of *Drosophila pseudoobscura*, 541
recA-independent deletion of repeated DNA sequences, sister-strand exchange mechanism, repeated DNA sequences in *Escherichia coli*, 631
recF gene in *Escherichia coli* K-12, mutant alleles, high and low level overexpression plasmids, 643
specific and global effects of gene, tandemly repeated genes, yeast, 711
Repressors, type I, *P* element mobility, 81
Retrotransposon, Ty*1*, rare tRNA-Arg(CCU), yeast, 309
Retrovirus, multiple insertions, quantitative traits in mice, 1099
Ribosome
-associated protein D-p40, dosage effect, *Drosophila stubarista*, 553
protein gene family, cryptopleurine resistance, yeast, 719
RNA
folding, distance effect, compensatory fitness interactions in *Drosophila*, 97
generation of temperature-sensitive *cbp1* strains, PCR mutagenesis, recombination and yeast, 981
RNA, transfer, deletion of single-copy, microtubule function, yeast, 955

Saccharomyces cerevisiae, 5, 17, 25, 35, 265, 275, 287, 297, 309, 321, 327, 343, 655, 665, 677, 693, 711, 719, 731, 931, 943, 955, 963, 973, 981
Segment, polarity, dissection of *fused*, *Drosophila melanogaster*, 1047
Segregation, mixed, recombination of chromosomes and YACs, meiosis in yeast, 297
Segregation distortion
evolutionary dynamics, spore killers, 923
negative, temperature sensitivity, *Drosophila melanogaster*, 831
Sex-determining system, variation, effect of a founder event, *Solenopsis invicta*, 843
Sexual cycle, plasmid suppressors, *Neurospora intermedia*, 993
Signal transduction, pheromone receptors, inhibition of pheromone response pathway, yeast, 943
Silencing, yeast, molecular definition, *PAS1-1* mutation, 931
Sister chromatid exchange, sister-strand exchange mechanism, *recA*-independent deletion, repeated DNA sequences in *Escherichia coli*, 631
Sizes, effective, subdivided populations, 1221
Solenopsis invicta, effect of a founder event, variation in genetic sex-determining system, 843
Spermatogenesis, single *P* element mutagenesis, *Drosophila melanogaster*, 489
Spore, killers, evolutionary dynamics, 923
Stem cells, embryonic, multiple retrovirus insertions, quantitative traits of mice, 1099
Sterility
hybrid, interspecific *Y* chromosome replacements, *Drosophila simulans*, 443
hybrid male, number of genes, *Drosophila simulans* and *D. sechellia*, 135
Suppressors
deletion of a single copy tRNA, microtubule function, yeast, 955
genetic and phenotypic studies, hypomorphic *lin-12* mutants, *Caenorhabditis elegans*, 755
glp-1, cell communication during development, *Caenorhabditis elegans*, 1011
intragenic dominant, *glp-1*, cell signaling in *Caenorhabditis elegans*, 1023
lin-12 hypomorph, interaction of genes, *lin-12* and *glp-1* in *Caenorhabditis elegans*, 765
plasmid, sexual cycle, *Neurospora intermedia*, 993
Synapse, specificity in *Caenorhabditis elegans*, mutations in *unc-37* locus, temperature-sensitive mutation in *unc-4*, 741

Temperature
-sensitive mutation in *unc-4*, mutations in *unc-37* locus, *Caenorhabditis elegans*, 741
sensitivity, negative segregation distortion, *Drosophila melanogaster*, 831
Thaxter, Roland, origins of multicellular development, 249

Tomato, classical and molecular linkage maps, chromosome *6*, 1175
Transcription, activation, point mutations, yeast centromere binding factor 1, 287
Transposeable elements
Dissociation, somatic variegation, maize *R* gene, 189
expression of *forked* gene, *Drosophila melanogaster*, 507
hobo enhancer trapping mutagenesis, insertion specificity, *Drosophila melanogaster*, 1063
maize genes, targeted by distinct classes of *mu* elements, 1141
Trees, California closed-cone pines, chloroplast DNA diversity, 1187

Variation, quantitative, estimation of effective number, additive and dominant loci, 907
Vegetative incompatibility, single amino acid difference, *Podospora anserina*, 45
VNTR, population genetics, computer simulation study, constrained recombination, 911

Yeast
centromere binding factor 1, point mutations, chromosome segregation, 287
chromosome-gain and increase-in-ploidy mutants, isolation, characterization, 677
chromosome segregation, cloning of *CHL4* gene, 327
cryptopleurine resistance, expression, ribosomal protein gene family, 719
deletion of a single-copy tRNA, microtubule function, 955
ends-in *vs.* ends-out recombination, 973
exogenous cAMP, responsiveness, alleles of *PDE1* and *PDE2*, 321
gene expression, *Drosophila melanogaster suppressor of Hairy-wing* zinc finger, 343
generation of temperature-sensitive *cbp1* strains, PCR mutagenesis, recombination, 981
genetic and molecular characterization, *GAL83*, 655
gene with specific and global effects, recombination of sequences, tandemly repeated genes, 711
HIR4-1 mutation, histone regulatory genes, 25
homologous and homeologous ectopic recombination, gene conversions, crossing over, 5
kinesin-related *CIN8* and *KIP1*, loss of function, suppression by *KAR3* motor domain mutations, 35
mitotic chromatid disjunction, *Spo12*, cell cycle kinases Dbf2 and Dbf20, 963
mixed segregation and recombination of chromosomes, single-division meiosis, 297
molecular and genetic analysis, *SNF7* gene, 17
mutations that enhance *cap2* null mutant phenotype, pattern of growth, morphogenesis, 693
pheromone receptors, inhibition of pheromone response pathway, 943
positive selection procedure, peroxisomal import, peroxisome assembly mutants, 731
screens for extragenic mutations, actin function, 265
silencing, molecular definition, *PAS1-1* mutation, 931
Ty*1* retrotransposition, rare tRNA-Arg(CCU), Ty*1* element ribosomal frameshifting, 309
upstream activating sequence, mutations, suppression of deletion, 665
